

Sepsis

At Healthfirst, we are committed to helping providers accurately document and code their patients' health records. This tip sheet is intended to assist providers and coding staff with the documentation and ICD-10-CM selection, on services submitted to Healthfirst—specifically for **sepsis**. It provides information from industry sources about proper coding practice. This document does not represent or guarantee that Healthfirst will cover and/or pay for the services outlined. Coverage decisions are based on the terms of the applicable evidence of coverage and the provider's participation agreement. This includes the determination of any amount that Healthfirst or the member owes the provider.

Sepsis – Chapter-specific guidelines state, “If the type of infection or causal organism is not further specified, assign code A41.9, Sepsis, unspecified organism.” When this diagnosis is reported, the patient's blood culture was negative for any causative organism.

ICD-10 Codes and Descriptions

ICD-10-CM	Description
A41.01	Sepsis due to Methicillin susceptible Staphylococcus aureus Includes: MSSA sepsis, Staphylococcus aureus sepsis NOS
A41.02	Sepsis due to Methicillin resistant Staphylococcus aureus
A41.1	Sepsis due to other specified staphylococcus Includes: Coagulase negative staphylococcus sepsis
A41.2	Sepsis due to unspecified staphylococcus
A41.3	Sepsis due to Hemophilus influenzae
A41.4	Sepsis due to anaerobes

Documentation and Coding

ICD-10-CM	Description
A41.50	Gram-negative sepsis, unspecified Includes: Gram-negative sepsis NOS
A41.51	Sepsis due to Escherichia coli [E. coli]
A41.52	Sepsis due to Pseudomonas Sepsis Includes: Pseudomonas aeruginosa
A41.53	Sepsis due to Serratia
A41.54	Sepsis due to Acinetobacter baumannii
A41.59	Other Gram-negative sepsis
A41.81	Sepsis due to Enterococcus
A41.89	Other specified sepsis
A41.9(†)	Sepsis, unspecified organism Includes: Septicemia NOS

(†) Use only if no other code describes the condition.

Please note: Not all ICD-10-CM codes are listed.

Documentation and Coding

Coding Tips

Sepsis due to localized infection

Localized infection progresses to sepsis

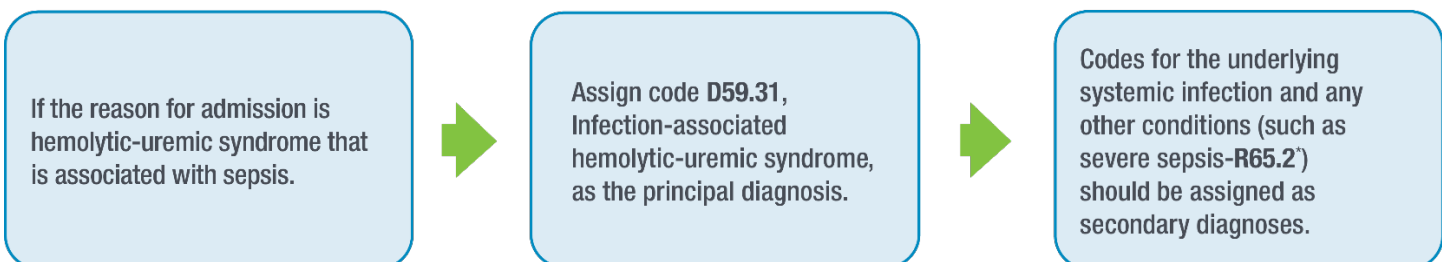

Sepsis due to post-procedural infection

Sepsis due to device, implant, and graft

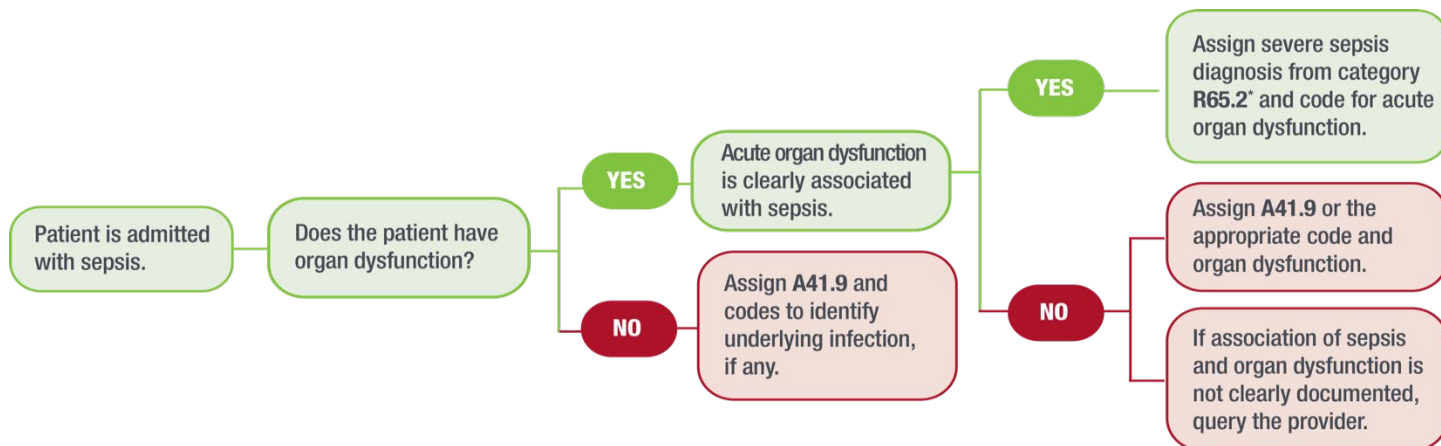

Hemolytic-uremic syndrome associated with sepsis

*Additional digit required to complete the diagnosis code.

Documentation and Coding

What documentation is needed to report sepsis?

- ✓ Documented diagnosis of sepsis
- ✓ Severity of illness and improvement/worsening of patient status
- ✓ Criteria met to determine the diagnosis and infection type
- ✓ Specification of causative organism, if known (e.g., sepsis due to pneumonia, implant, graft, etc.)
- ✓ Sequential Organ Failure Assessment (SOFA) or quick SOFA (qSOFA) score
- ✓ Clinical findings (e.g., high fever, tachycardia, hypotension, elevated white count, altered mental status, etc.)
- ✓ Any one organ dysfunction criteria or SOFA score of two or more is required to diagnose sepsis
- ✓ Organ dysfunctions such as elevated transaminases, Type 2 MI, Critical care myopathy, if related to infection, needs to be documented
- ✓ Document the sepsis due to infection (type and source or location of infection) with acute sepsis-related organ dysfunction as evidence by (list the organ dysfunctions) with or without septic shock
- ✓ Past medical history or active history of any comorbidity
- ✓ Presence of risk factors and/or complications such as organ failure or dysfunction
- ✓ Treatment plan, orders, prescriptions, and referrals (include how the condition is being monitored, evaluated, and/or treated)
- ✓ Clear documentation regarding whether the condition was Present on Admission (POA)

Documentation and Coding

Documentation Tips

- Diagnosis of sepsis cannot be made based solely on labs or bloodwork findings.
- It is best practice for the documentation of sepsis to be specific, consistent, and clear.
- Only “severe sepsis due to infection” and “sepsis with acute organ dysfunction” are represented by codes for sepsis with the **R65.2*** subcategory.
- The “with” guideline in the Official Coding Guidelines (Section 1.A.15) does not apply to sepsis and organ failure dysfunction; the physician must make the link.
- The physician must document the systemic infection. If it is not clear whether sepsis or severe sepsis was present on admission, query the physician for clarification.
- Systemic inflammatory response syndrome (SIRS) (**does not equate to sepsis**):
 - Do not assume a link when the documentation states SIRS and an infection is present. Query the etiology of SIRS. If no other information is available, report a code from subcategory **R65.1***.
 - If SIRS is secondary to a localized infection such as pneumonia without organ dysfunction, code only the localized infection since there is no separate code for SIRS due to an infectious process in ICD-10-CM.
- Terms that are not sufficient to code sepsis:
 - “History of sepsis” – This indicates the condition is already resolved.
 - “Urosepsis” – This is a nonspecific term and should not be considered synonymous with sepsis.
 - “Septic/Toxic” – These are adjectives and not diagnoses; use full terms such as “septic shock” instead.
- Bacteremia without organ dysfunction is not sepsis, just infection with bacteremia.
- **Z51.A** - Encounter for Sepsis aftercare
